Raster Effects are a specialized group of tools used for image effects. The Burn and Dodge tools change the brightness, color, and contrast of an image. The Brush tool works similar to a paintbrush. To use the Brush tool, click on an area in your document, or press the B key. You can then change the texture of your canvas, type out text, set colors, and draw lines. To change the properties of a brush, such as width or pressure, use the Brush panel. The type tool allows you to type messages into your canvas. It can be used to create text, draw lines, create shapes, or apply effects to them. The

---

Shape tool can be used to quickly create vector graphics or shapes. The Smart Brush tool can then be used to edit the shape. The Line tool can be used to create drawn lines. You can use the Pencil tool to draw freeform lines and other shapes. The Type tool allows you to add bold or italic text to your image. Use the Shape tools to create text and then use the Type tool to change its properties. The Eraser tool lets you quickly erase parts of the image. You can use it to remove a portion of an image, or use it in conjunction with a selection mask to create a clipping path. The Freeform Pencil tool is used to create and edit freeform lines and shapes. It is very

---

similar to the Line tool. The Gradient tool uses control points to create gradients, which are used to create soft, curved transitions. The Gradient tool has several options. Use the Gradient box to set the type of gradient and the number of gradient steps. The Gradient tool can be useful for creating and editing gradient fills. The Pen tool can be used to draw freeform lines, shapes, or paths. When you start drawing with the Pen tool, the Pencil tool is automatically activated. The Color Picker tool is used to choose colors. You can use the panel to choose colors from a palette or any of your images. The Magic Wand tool is used to select a color or an object in

---

the image. The Selection tool is similar to a Magic Wand, except it can select multiple objects in the image. The Zoom tool is useful for zooming in and out of your work area. You can also change the Zoom level. The Paint Bucket tool is used for filling a selection or area with a color. The Content-A

#### **What's New In?**

News came down Tuesday afternoon that Chicago Bears linebacker Leonard Floyd has been suspended for the first four games of the 2018 NFL season for violating the league's performance-enhancing drug (PED) policy. The suspension is effective

---

immediately and runs for games 1-4 of the season. Per his PED policy suspension, Floyd will be permitted to return to practice during the suspension. The suspension comes in addition to the one he already served for a violation of the league's substance-abuse policy, in relation to a November 2016 drug test. That suspension also was for four games. The league released a statement: "In November, Leonard Floyd was suspended by the NFL and will serve a four-game suspension, including the first four games of this season, for violations of the NFL's Policy on Substances of Abuse. The suspension will become effective immediately."

---

Floyd will be permitted to return to practice during the suspension. The discipline is consistent with the appropriate discipline in previous cases of this nature.” While the suspension is coming in connection to a policy that applies to players at all positions, in other NFL cases (per Pro Football Reference) Floyd has only missed games while serving suspensions. The first came in 2017, for a violation of the policy. He had a second suspension in 2018, which he served during the offseason after a sample came up positive for metabolites of a substance not on the list of banned substances.

Q: How to link a custom field to a Custom CMS

---

Page? I have created a custom Pages called "Bookings" (which is displayed on my site) which has data about a job/business booking, but I need to link that to a custom field in the Custom CMS so that I can display some custom data in the booking's status and details pages - without duplicating that data on my business's normal Pages. The field is "job\_type" which is a dropdown menu, but when I try and link the field to the booking's page, it seems to replace the entire page with the single data value when the field is edited. How can I link the custom field to the custom Pages? Custom pages are created using the Custom CMS and when creating a page I add the

---

custom field at the top with the Menu/Link settings (see image below).  
A: If you're using the WordPress REST API, the following hooks provide an interface to request and edit the pages
